Dining technology that's the first of its kind

OBI® Eating device is a revolutionary assistive feeding device that creates an enjoyable and dignified dining experience for those who rely on a caregiver by allowing them to control food selection and pace of eating. This device also enhances social interaction during meals, improves caregiver productivity, and helps to alleviate time pressures and stress.

Product Benefits

- **Accommodating:** Guide the arm by hand and teach it a new location in seconds
- **Safe:** Collision detection
- **Modern:** Iconic design, as well as minimalist setup and operation
- **Intuitive:** Two user controls to command food delivery and choose among four food bowls
- **Effective:** Portion control, food repositioning and multi-directional food capture
- **Refined:** Movements easily personalized, quiet and inconspicuous, graceful and life-like motions
- **Easy Cleaning:** Wipe down device's base and arm with a disinfecting wipe or damp towel. The spoon, plate, and placemat can all be washed in a sink or dishwasher
- **Lightweight and Portable:** At 7 lbs, the eating device comes equipped with a rechargeable battery, making it perfect to pack up and eat on the go

Mobility Impairments

The eating device benefits people of all ages living with conditions affecting the upper extremities, especially:

- Amputation
- Amyotrophic lateral sclerosis
- Arthrogryposis
- Cerebral palsy
- Multiple sclerosis
- Muscular dystrophy
- Neuromuscular conditions or injuries
- Parkinson's disease
- Rheumatism
- Spinal cord injury
- Stroke

There is no need too small.
No task too great.
